

ENVIRONMENTAL POLICY

MT Waste Management is committed to applying and promoting the principle of good, sustainable environmental practices to minimise the impact our activities have on the environment and encouraging our Clients and Vendors to do the same.

MT Waste Management will develop, maintain and implement policies and procedures to assess and continually monitor and reduce our operational impact on the environment.

We will work with our Clients to apply principles of elimination, reduction, reuse and recycling to the management of their products and packaging.

We have introduced procedures that vet all our Vendors to ensure that they are both environmental friendly and compliant with current legislation.

We will communicate regularly with our personnel on matters of environmental policy and practices.

The development and implementation of this policy is a commitment of MTWWM management and a shared responsibility with our employees and stake holders.

MTWWM also recognises that a commitment to the following guiding principles is fundamental in carrying out the company's environmental policy:

- To comply with environmental regulations and to the extent where practical, implement programs that exceed governmental requirements.
- To consider environmental impacts as an essential element when evaluating new projects, products and operations.
- To establish objectives and targets aimed at the prevention of pollution by reducing the generation of waste, recycling waste that is generated and properly disposing of waste that cannot be recycled.
- To encourage conservation of energy, water, and natural resources through increased efficiency and the introduction of new technology.
- To provide employees with a better understanding of environmental issues and the company's commitment, policies, and programmes to preserve and improve the environment.
- To openly make this policy available to all employees and the public.
